The TX® SideSeal automatic strapping machine's modern design features a simplistic control panel where all parameters and diagnostics are met at the touch of your finger tips.

The TX® robust solid steel frame contains our intricate yet ergonomic TX® direct drive 4 in 1 strapping system. This system encompasses highly efficient, non proprietary technology. Every unit is equipped with electronic gates to eliminate friction during the strap cycle which pairs directly with the TX® high tensile stainless steel feed/tension/seal carriage. To top it off, our TX® ACR acts as a line of defense to prevent any jam in case of a strap misfeed to minimize downtime.

Our TX® SideSeal automatic best suits any high speed applications that desire superior performance with the lowest cost of ownership on the market.

Transformer provides complimentary installation and training with the purchase of this machine.
